PROFESSIONAL EXPERIENCE

Senior Software Engineer, Performance Marketing, Goodgame Studios | Hamburg, Germany — Nov. 2026 - Present

- Lead playable ad and video-base production end to end: design each mechanic, ship it as both a self-contained web playable (TypeScript/Three.js) and a Unity build, and test new formats and interactions to stay ahead of market trends.
- Own the creative side of the UA funnel from first impression to Day 3: benchmark competitor playables and run creative and marketability A/B tests with growth managers and creative strategists, optimizing CTR, IPM, CVR, D1/D3 retention, and ROAS from pre-launch through global launch.
- Define the playable workflow, tooling, and standards: a no-code tuning editor connected directly to the playables, Node.js build/QA pipelines for multi-network packaging, and ad-network reporting feeding back into iteration.
- Drive AI-assisted code and asset-based production, and automate LLM-assisted variant and localization generation to scale creative-testing velocity.

Senior Software Engineer, Performance Marketing, Agave Games | Istanbul, Turkey — Apr. 2026 - Nov. 2026

- Owned end-to-end playable ad development for a 50M+ install puzzle portfolio; my playables were the main driver of one title's UA scale, reaching $560K+ in daily ad spend and 1M+ daily clicks and helping push it into the Top 10 charts on both iOS and Android.
- Led playable creative iteration: benchmarked competitor ads to spot winning hooks, then designed and ran gameplay iterations and A/B tests to improve CTR, IPM, and CVR while keeping ads true to gameplay to protect early retention.
- Co-built Agave AI Studio, an internal AI creative platform replacing a third-party UGC tool at ~1/3 the cost, featuring AI video generation, localization, an LLM agent converting gameplay videos into playables, and a variant generator that lets designers and growth managers ship playable variants without engineering, accelerating high-volume creative testing.

JustDice GmbH | Hamburg, Germany

Senior Playable Ads Developer — Oct. 2024 - Apr. 2026

- Owned playable ads and IECs end-to-end across a rewarded-gaming portfolio of 20+ apps and 300M+ lifetime downloads, from competitor benchmarking and concept development to post-launch optimization of CTR, IPM, CVR, and ROAS.
- Built an internal TypeScript/Node.js platform for producing playable ads, HTML5 games, and IECs, featuring automated asset compression and one-click multi-network export. Also developed AI-powered plugins for Photoshop, After Effects, and Figma, which were rolled out across teams, reducing production time per creative.
- Analyzed A/B test results and in-playable interaction-event data to identify engagement patterns and drop-off points throughout the ad-to-install funnel, aligning ad messaging with the in-app experience to improve install rates and user quality (retention and LTV).

Playable Ads Developer — Apr. 2023 - Oct. 2024

- Developed size-optimized playable ads and HTML5 games for rewarded-gaming apps, aligned with UA strategy and optimized for CTR, IPM, and CVR.
- Created performance-optimized 2D/3D assets using Blender, Photoshop, and Figma, balancing visual quality with strict ad-network size limits.
- Built plugins for Unity, Photoshop, After Effects, and Figma to automate marketing production workflows and accelerate creative production.

Playable Ads Developer & Consultant (External), MY.GAMES | Amsterdam, The Netherlands — Mar. 2025 - Mar. 2026

- Designed and developed playable ads for mobile games in TypeScript, Three.js, and PixiJS, delivering single-file, MRAID-compliant creatives within each ad network's size and CTA rules for global UA campaigns.
- Advised on the technical and creative approach for each playable, optimizing load time and runtime performance on low-end devices and tightening core gameplay hooks to lift CTR and IPM.

Playable Ads & Marketing Game Developer, Panteon Games | Ankara, Turkey — Nov. 2021 - Apr. 2023

- Developed size-optimized Unity/Luna playable ads and HTML5 games for hyper- and hybrid-casual titles, supporting global UA campaigns.
- Rapidly prototyped gameplay mechanics in Unity (C#) for video creatives and marketability tests, validating hooks through CTR and IPM performance.
- Built reusable playable ad templates, Unity packages, and editor tools to streamline production and accelerate creative A/B testing across ad networks.
- Collaborated with growth and creative teams to optimize ad performance (IPM, CPI, CTR) while mentoring junior developers on production workflows.

Game Developer (Intern), GEFEASOFT | Mugla, Turkey — Mar. 2021 - Jul. 2021

- Developed WebGL and HTML5-based serious games using C# and Unity.
- Designed gameplay systems, optimized performance for web deployment, and participated in feature development throughout the project lifecycle.

EDUCATION

B. Sc., Electrical & Electronics Engineering (100% English), Eskisehir Osmangazi University — Sep. 2016 - Aug. 2021

- 3.01/4.00 GPA
- Worked as an intern in the Artificial Intelligence and Robotics Lab. Played an active role in developing the website for the course.

SKILLS

Programming Languages: C#, TypeScript, JavaScript, Python, C++

Game Development: Unity, Unity Playworks (Luna), Cocos Creator, ThreeJS, PixiJS, GSAP, GLSL, R3F

Frontend: HTML, CSS, Sass, TailwindCSS, React

Backend & Databases: .Net, Node.js, Express, MySQL, PostgreSQL, MongoDB, Prisma, Redis, RabbitMQ

DevOps & Tools: git, npm, Webpack, Vite, Docker, CI/CD, Jest, UXP

Design Tools: Blender, Spline, Figma, Adobe Photoshop, Adobe After Effects, Adobe Premiere Pro

Soft Skills: Marketing KPIs Analysis, A/B Testing & Experimentation, AI-Assisted Engineering & LLM Tooling, Creative Strategy & Competitor Benchmarking, Problem Solving, Cross-functional Communication, Quick Learner, Mentoring

LANGUAGES

Turkish: Native | **English:** C1 *EF Standard Test: 81/100* | **Korean:** A2 *TOPIK I: 156/200* | **German:** A2

ACTIVITIES

Founder, Crabtic | Hamburg, Germany — Aug. 2025 - Present

Co-Founder & Administrative Assistant, Korean Culture Academy | Eskisehir, Turkey — Jun. 2019 - Nov. 2021

IGET-IT Member, AIESEC Turkey | Eskisehir, Turkey — Oct. 2017 - Jun. 2018

PROJECTS

Agave Video Studio — Jun. 2026 - Aug. 2026
Python, React, AWS S3, ElevenLabs

- Developed an internal dashboard for managing marketing video generation across multiple mobile game titles, with asset tracking, Drive-based bulk imports, automated rendering, and AI-powered subtitles using ElevenLabs.

base122-encoding (npm package) — Dec. 2025 - Jan. 2026
TypeScript, Node.js, Vite

- Developed a package implementing Base-122 encoding, reducing data size by up to ~30% compared to Base-64 for use in data URIs.

Figma Design Plugin — Jul. 2025 - Dec. 2025
TypeScript, HTML, CSS, Figma, Vite

- Developed a Figma plugin that automates the creation of static store screens, network end-cards, and marketing assets, featuring DeepL API integration for seamless multi-GEO translations.

texture-optimize-pro (npm package) — Oct. 2025
TypeScript, Node.js, Sharp

- Developed a texture optimization library for HTML5 games (PixiJS/ThreeJS), leveraging Sharp for high-performance image processing with per-texture configuration of max size, format, and quality.

Text Localization - GEO Package — Jan. 2025 - Feb. 2025
TypeScript, Node.js

- Developed a localization package that detects device language and updates playable ads/HTML5 game texts for multilingual support.

AdCraft — Oct. 2024
HTML, CSS, TypeScript, Tailwind, React, Vite

- Developed a tool designed to streamline the manipulation of ad network requirements and enable efficient build generation by providing a simple interface for playable ads/HTML5 games.

Adobe Photoshop Design Tool — Jul. 2023 - Dec. 2023
ExtendScript, JavaScript, CSS, HTML, UXP, Adobe Photoshop

- Developed an Adobe Photoshop extension focused on generating static store screens, network end-cards and marketing assets.

Unity Playable Ads Kit — Apr. 2022 - Sep. 2023
C#, Unity

- Developed a plugin for playable ads development, featuring essential template generation, translation (localization) package and utility methods.

Semantic Segmentation using Deep Learning (Graduation Project) — Sep. 2020 - Jun. 2021
Python, NumPy, PyTorch, pandas, SciPy, OpenGL, Linux

- Implemented deep learning models in PyTorch for 3D point cloud semantic segmentation, enabling a mobile robot to understand its surroundings in search-and-rescue scenarios at the university's AI and Robotics Lab.

CERTIFICATIONS

Google Ads Certification, Google — Aug. 2026

- Google Ads Apps, Google Ads Measurement, AI-Powered Performance Ads

Three.js Journey, by Bruno Simon — Jun. 2024

- JavaScript, ThreeJS, CannonJS, GLSL, GSAP, R3F, HTML, CSS, Blender, Rapier

Back-End Apps with Node.js and Express, IBM — Dec. 2023

- JavaScript, Node.js, Express

Professional Meta Front-End Developer Certificate, Meta — Nov. 2023

- JavaScript, HTML, CSS, Bootstrap, Sass, React, npm, Jest, Figma

Intermediate Object-Oriented Programming for Unity Games, University of Colorado — May 2021

- Unity, C#
